

**ABSTRACT**

The present invention has an object to provide a binder insert enabling a photograph to be mounted without using adhesive and the like and to write memos as needs arise. The binder insert is comprised of a plastic body and having a bag shape with the upper side thereof opened, a photograph store portion and a memo store portion are provided by dividing the body at a melt portion, a store board, which is made by folding a thick paper in two, having slits at predetermined positions thereof to insert corners of a photograph and a color paper therebetween, and a memo paper to be inserted into a memo store portion. At one side of the body, a binding section having a plurality of binding holes is provided. Slits provided within the store board are a set consisting of four pieces and plural sets are positioned in accordance with standardized photograph sizes for insertion of corners of a photograph. A form of each slit is curved, and round holes are provided at both ends of said curved slits. Color print portions having different colors in accordance with the standardized photograph sizes are provided in the color paper at corresponding positions of slits provided within the store board.
